

Cloud Networking

A Smarter Move to Enable Business Growth and Digital Commerce

Network as a Service (NaaS)

NaaS is a cloud-based networking solution hosted and managed by CBTS 24x7x365. It replaces disparate on-premises network equipment that requires large capital expenditures and daily management. It's a smarter way to keep business operations up, running, and protected.

- Significant cost savings through a predictable monthly payment model
- Monitored and managed by CBTS engineers 24x7x365
- Easily scales branch locations up or down to meet business needs
- Anti-malware and perimeter defense technology
- Real time data analytics and customer technology
- Improved network performance and functionality

SD-WAN

SD-WAN is a cloud delivered networking solution that replaces expensive MPLS. It can sit on any connectivity and offers low-latency and high performance access to cloud applications.

- Pay a monthly fee to replace expensive MPLS and ensure high performance
- Experience network visibility and control from a central management console
- Have your network supported and managed by CBTS 24x7x365
- Measure network quality and steer traffic nimbly
