

CenturyLink® Adaptive Network Security

Powerful Protection for your Internet Connections

You rely on the Internet for mission-critical connections to customers, partners and employees. But heightened levels of security risk from an expanding network mean you need to proactively defend against attacks with a flexible, multi-layered, network-based security solution that is easy to deploy and run – within budget.

CenturyLink has created easy-to-use, powerful protection for your Internet connections at affordable rates with the visibility, management and control you need to monitor, block and report attempts to break into your network. Delivered in one of three service bundles, you can quickly adapt to new threats without requiring huge investments in capital and security expertise. With CenturyLink Adaptive Network Security, you enable protection physically closer to the origins of threats with greater efficiency and effect. Also, Adaptive Network Security is flexible, allowing you to protect your connections with CenturyLink, hybrid environments and third-party networks.

Why Choose CenturyLink Adaptive Network Security?

Increase Efficiencies

Flexibility to bring your own bandwidth enables holistic defense – cloud-based protection with flexible commercial models and access options provides cost efficiencies

Multiple Connectivity Options

Supports GRE, IPsec, MPLS, Hybrid on-premises (CPE) and cloud-based deployments – available VLAN segmentation shields data

Comprehensive Visibility and Control

Centralized policy management with visibility through a consolidated portal and support from CenturyLink Threat Research Labs and Global Security Operations Centers

Broad Global Coverage

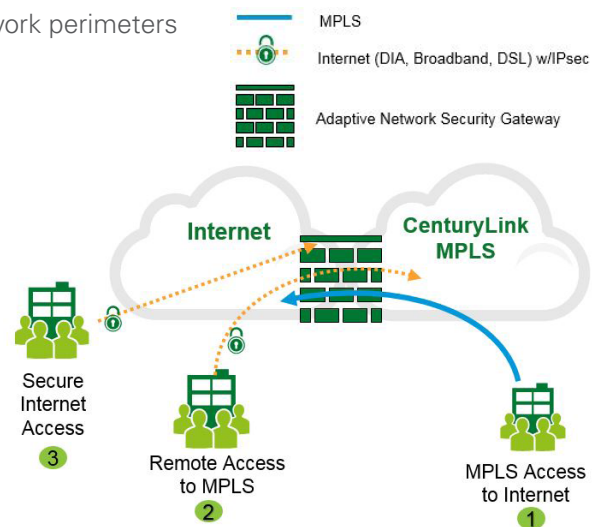

Reduces latency and increases application performance at your network perimeters

Use Cases

CenturyLink Adaptive Network Security supports a broad range of use cases to enable security for sites and mobile users, regardless of connection type. Three common use cases for secure access include:

1. TO Internet FROM MPLS For MPLS Users
2. TO MPLS FROM Internet For Remote Offices
3. TO Internet FROM Internet For Remote Offices

All connections leverage bandwidth and features at/on the Adaptive Network Security Gateway for consistent security policies.

Adaptive Network Security Bundles

Security made simple. Make smart decisions quickly by choosing the Adaptive Network Security Bundle that best meets your needs.

Adaptive Network Security Bundle Comparison	Essential	Enhanced	Comprehensive
Supports Bring Your Own Bandwidth Internet	●	●	●
Firewall (100 rule set)	●	●	●
Intrusion Detection Service	●	●	●
Intrusion Protection Service	●	●	●
24/7 Global Security Operations Center Support	●	●	●
Management & Monitoring of Deployed Security Policies	●	●	●
99.9% Gateway Availability	●	●	●
Web Content/URL Filtering		●	●
Application Awareness and Control			●
Anti-Malware (Sandboxing)			●
Data Loss Protection			●

Adaptive Network Security Essential Bundle

Includes next-gen firewall with Intrusion Detection and Protection, Management and Monitoring, and the flexibility to bring your own bandwidth.

	15 Mbps	150 Mbps	300 Mbps
3-Year Term Monthly Charge	\$350	\$1,000	\$1,750
Installing One-Time Charge	\$1,050	\$1,050	\$1,050

Technical Parameters: Limited Inbound Static NAT < /28; Less than 100 Firewall Rules; CPE Router must terminate IPsec; Bandwidth = Aggregate Bandwidth at the gateway for all sites

Adaptive Network Security Enhanced Bundle

Includes next-gen firewall with Intrusion Detection and Protection, Management and Monitoring, web content/URL filtering, and the flexibility to bring your own bandwidth.

	15 Mbps	150 Mbps	300 Mbps
3-Year Term Monthly Charge	\$550	\$1,500	\$2,500
Installation One-Time Charge	\$1,450	\$1,450	\$1,450

Technical Parameters: Limited Inbound Static NAT < /28; Less than 100 Firewall Rules; CPE Router must terminate IPsec; Bandwidth = Aggregate Bandwidth at the gateway for all sites; Active Directory Integration is optional for detailed Web browsing policy

Adaptive Network Security Comprehensive Bundle

Includes next-gen firewall with Intrusion Detection and Protection, Management and Monitoring, Data Loss Protection, application awareness and control, web content/URL filtering, anti-malware (sandboxing), and the flexibility to bring your own bandwidth.

	15 Mbps	150 Mbps	300 Mbps
3-Year Term Monthly Charge	\$2,100	\$4,100	\$5,400
Installation One-Time Charge	\$2,650	\$2,650	\$2,650

Technical Parameters: Limited Inbound Static NAT < /28; Less than 100 Firewall Rules; CPE Router must terminate IPsec; Bandwidth = Aggregate Bandwidth at the gateway for all sites; Active Directory Integration is optional for detailed Web browsing policy
